

A Proposed Amendment
to Eliminate our National Debt and
Bring Our Country and World back into
Prosperity with an
Asset Based Receipt Monetary System

October 6, 2016

Dear Congressman,

I am respectfully requesting that you submit to Congress and to the States for ratification my attached Amendment to our United States Constitution. It is a proposed Amendment to eliminate our National Debt that is bankrupting our government and our nation by implementing an Asset Based Receipt Monetary System provided for in our Constitution, but which was never implemented by Congress.

This Asset Based Receipt Monetary System that will bring prosperity back to our country and to the world is based on the tally stick system that brought prosperity for 500 years to Great Britain under King Henry I and his descendants in the Middle Ages. The tally stick system was an asset based receipt monetary system where the tax payer paid his taxes to the government and the government agent notched the amount of the taxes paid in a tally stick which was split vertically down the middle leaving the notches visible in both halves of the tally stick. The tax payer was given half of the tally stick as a receipt for taxes paid which became the only new money created in their monetary system, and the government used the other half of the tally stick as taxes to pay for government expense. That system was later replaced by a debt-based monetary system when the bankers set up the Bank of England and started lending money they created as debt to the King. The bankers then exported their debt based monetary system to the United States when the Federal Reserve Act was passed by Congress in 1913.

Today a fundamental change in our monetary system is now necessary because with a \$19 trillion dollar national debt it should be obvious that Congress cannot borrow its way out of the debt. Neither can Congress pay off the debt because when money that is created as debt is paid off that money ceases to exist. Paying off the national debt would leave us without any money for an economy to run on. The compound interest on the National Debt is increasing each year. Soon it will take all the money the Congress can muster in taxes just to pay the interest on the National Debt, with NO money left to run the government!

So how do we solve this problem and bring prosperity back to our country with enough money to keep our government running and enough money in circulation to run our economy?

By implementing an Asset Based Receipt Monetary System as provided for in our Constitution.

It will:

- ✓ Eliminate the National Debt.
- ✓ Give America an asset-based monetary system where DEBT will never again threaten our national sovereignty.
- ✓ Give the government all the money it needs to operate efficiently.
- ✓ Give the people a stable monetary system without inflation or deflation with no booms and busts that rob the people of their wealth.
- ✓ Bring prosperity to all because 50% of the cost of all things in the present debt based system goes to the bankers in interest. With debt eliminated, interest will be eliminated reducing the cost of everything 50%.

Congress Must Take Action to Implement an Asset Based Receipt Monetary System Now before our country goes bankrupt!

This proposed Asset Based Receipt Monetary System when implemented will bring prosperity back to America again, with enough money to keep our government running efficiently and a stable economy that will bring prosperity to the people.

Sincerely,

Rodney M. Cluff

Dear Congress and State Legislatures,

I am urging you to fix the awful financial mess our country is in. Millions of Americans have lost their homes and businesses to foreclosure, and more than 20 states and 100's of cities and counties are on the brink of bankruptcy. Congress bailed the banks out of their financial boondoggles in 2008 and now the banks and their fellows are using the money to buy up our State and local government infrastructure. They are also buying back taxes on property with the bail out money. Then with the rest of the bailout money, the banks have been gambling on the international derivatives market which is now so large that at any moment they could crash the world economy. This would cause businesses to fail and the people to starve. With the greatly increased unemployment people would lose their homes to foreclosures on their homes and businesses as well as defaulting on their property taxes. If the world economy crashes, our country and even the world will enter another Great Depression of scarcity and starvation.

Congress created this financial mess. Congress can fix it. There may still be time to avert the financial Armageddon we are headed into, if Congress will act soon to correct the financial mess we are in.

We can learn from history how to do this, even from our enemies. When Hitler was elected Chancellor of Germany, they were in the depths of the Great Depression as were we. So he asked his manufacturers why they weren't manufacturing. They said, "The Banks won't lend us any money." He then asked the farmers why they weren't producing crops. They said, "The Banks aren't lending us any money." So Hitler fixed the problem by taking over their national bank and getting money out to his people without debt and without interest. In just a couple of years, they had a booming economy and

were able to host the Olympics and they nearly took over the world in World War II. The truth of history is this: We Americans were suckered into World War II to repossess Germany for the bankers and their minions because Hitler put his people first.

Are you willing to put America first?

In *Billions for the Bankers, Debts for the People* (1984), Sheldon Emry testified that,

"Germany issued debt-free and interest-free money from 1935 and on, accounting for its startling rise from the depression to a world power in 5 years. Germany financed its entire government and war operation from 1935 to 1945 without gold and without debt, and it took the whole Capitalist and Communist world to destroy the German power over Europe and bring Europe back under the heel of the Bankers. Such history of money does not even appear in the textbooks of public (government) schools today."

Now, today China owns their national bank and so have financial control over their economy for the benefit of their country. Yet our own country is in debt to the international bankers who use the money for their benefit to create booms and busts, which they call their "business cycle" which they use to repossess people's property -- which is NOT good for the people. The reason is: Congress gave the bankers control of our money supply in the Federal Reserve Act of 1913. The bankers manipulate the money to their benefit. What is only good for the bankers, is NOT good for the people, because with the bankers' monetary Ponzi scheme they are bankrupting our whole country.

Congress MUST get back control of the money supply from the private bankers, or else there will be total CHAOS soon.

President Obama said he can't tell the bankers what to do. But Congress can. In the constitution, Congress is given the power in the constitution by the people to make money and regulate the value of it so that there are no booms and busts. The bankers are fond of creating booms and busts so they can repossess everyone's property. This is not GOOD for the people. What is good ONLY for the bankers, is NOT good for the people, nor our government, because with the death spiral of debt the bankers have gotten us all into, soon our country will go bankrupt.

To remedy this, Congress MUST immediately set up a banking system where there is no inflation or deflation of the money supply to cause prices to rise and fall arbitrarily. For the benefit of the people, Congress should create a new monetary system where money is issued as an asset, not as debt.

Inflation of the money supply is the placing of too much money into circulation. Deflation of the money supply is not placing enough money into circulation. The current banking system inflates the money supply by approving too many loans, and creates deflation by not approving enough loans. This is purposely done to create booms and then busts so they can repossess real property for money they create out of nothing. The current Federal Reserve monetary system creates money only as debt.

Congress has no power given it in the constitution to delegate the regulation and management of our money supply to any private institution. But it did so anyway, fraudulently, in 1913 in the creation of the Federal Reserve Bank Corporation, a private entity owned by banks operating in the United States which banks are owned mostly by foreigners, principally from England, Switzerland, Netherlands and Germany.

Near Christmas in 1913, after all those that opposed the Federal Reserve Act had gone home for Christmas, those that were for it, stayed behind and passed the Federal Reserve Act when Congress was not officially in session. This was a fraudulent act, because Congress was not even in session. President Wilson later rued the day he signed the Federal Reserve Act, because it gave the monetary power to the international bankers that use it to rule the world.

Learn more about the history of money creation [here](#).

One important omission in the history of money cited in the link above is that the main cause for the extreme inflation of the continental script during and immediately after the Revolutionary War, was not the Congress placing too much money into circulation, but instead was the Bank of England who shipped boatloads of counterfeit continental script over to America flooding our economy with bogus counterfeit money that brought the value of our money to practically zero. For this reason, the founders provided for an asset based monetary system based on gold and silver in our inspired constitution – but it was never implemented by Congress.

Another time in history when a privately-owned central bank flooded an economy causing hyper-inflation was at the end of World War I, in the German Weimar Republic. The head of the privately owned Reichsbank central bank of Germany, Schacht, admitted in his 1967 book, *The Magic of Money*, that it was the privately-owned Reichsbank, not the German government that was pumping new currency into the economy by making massive amounts of currency available for borrowing in wild speculation that caused the hyper-inflation. When Hitler was elected Chancellor of Germany, he corrected this problem by taking over the bank and issuing debt-free, interest-free money to the German people.

The United States Federal Reserve's monetary system is a gigantic Ponzi scheme where money is created only as debt. In fact, Congress has entered into a racketeering arrangement with a private corporation, the Federal Reserve, by mortgaging our whole country to this bank, and blackmailing Americans into paying Income Tax to pay for the interest on the National Debt.

On the face of each dollar bill, it says, "Federal Reserve Note," which is a debt instrument. The fact is, if no-one borrowed any money from the Federal Reserve and its commercial banks, there would be NO money in circulation, except for the relatively few paper dollars and coins that the government issues - - hence we would have no economy, if no-one borrowed money from the banks. In fact, if all the debt was paid off in the United States, there would be NO money in circulation, except for the few coins and relatively little paper money that the U.S. government puts into circulation the through Federal Reserve banks -- because most money is created only as debt in the Federal Reserve monetary system, and when that debt is paid off, that money created as debt ceases to exist.

Yet, because the interest money is NEVER created, every year a greater and greater number of people and businesses have to go bankrupt just to pay the interest. So then banks get real property for worthless paper or digital money that they create out of thin air. It is a Ponzi scheme because as debt is paid off, that money ceases to exist, and so just to keep enough money in circulation, more and more debt has to be created every year and borrowed from the bank just to keep money in circulation enough to have an economy. The fact is, there is not enough borrowing in the United States by the people or businesses to keep enough money in circulation to have a healthy economy. The Federal government has thus ended up being the borrower of last resort in this Ponzi scheme just to keep enough money in circulation to keep the economy going. The danger is that soon the National Debt will be so great that the interest payments will be bigger than income from taxes to pay for it, and at that point, our nation will go into default.

An even greater danger looms for our country once we go into default on the National Debt. For example, if I don't pay the mortgage on my home, the bank repossesses it. The same happens with countries. The fact is, Congress has literally mortgaged our whole country to the private Federal Reserve Bank and the debt is skyrocketing. Since in the Federal Reserve monetary system, money is created ONLY as debt, if Congress should balance the budget or quit borrowing ever greater and greater quantities of money from the Federal Reserve, our economy would go into a deep depression, because as debt is paid off, that money created as debt ceases to exist. In the Federal Reserve Ponzi monetary system, where money is created only as debt, ever greater amounts of debt have to be entered into just to keep enough money in circulation in order to have an economy. Why? Because the money needed to pay the interest on the debt is NEVER created! Additionally, if no-one borrowed

any money from the Federal Reserve banking system, there would practically be almost NO money in circulation enough to have an economy, and hence the economy would grind to a halt.

In the Federal Reserve's debt-based monetary system, the interest money is never created, and so ever greater amounts of debt have to be entered into in their monetary system to pay the debt. So the Federal Government has ended up being the borrower of last resort borrowing every greater quantities of money from the Federal Reserve, just to keep enough money in circulation to have an economy. The fact is, the Federal Reserve monetary system was created by the bankers to eventually bankrupt our country so the owners of the Federal Reserve system could repossess our country. The bankers debt-based monetary system will bankrupt any country that uses their debt-based Ponzi monetary scheme. We have reached that point now, in February 2011, our country's debt-to-Gross National Product Ratio reached 102%. Greece recently defaulted when their debt-to-Gross National Product Ratio reached 140%. The danger is that when the Federal government goes into default in the very near future, the Federal Reserve and its associated central banks around the world will attempt to repossess our whole country.

This is the modus operandi of the central bankers since the 1700's when Amchel Rothschild set up the first central bank in Germany. His business was to lend money to the government. The interest he made was used to build up enemy countries where he also had his sons set up central banks. Whenever a country defaulted on their national debt to his central bank, he would use other countries to take them over. Ever since then, all wars have been the result of his monetary scheme. The international bankers even today finance BOTH sides of every war, so that they can determine the outcome to their advantage. Proof of this is the audit requested by Congress and mandated by the Supreme Court of the 2008 bailout of the banks by Congress. In that audit it was found that the Federal Reserve financed the Central Bank created by the rebels that toppled Omar Kaddafi in Libya.

Even so, the Federal Reserve today uses the \$1 trillion plus they make off the American economy every year in interest to build up countries around the world that they could possibly use to take over our country when we finally go bankrupt and default on the national debt.

WHAT SHOULD WE DO?

Congress should immediately declare the Federal Reserve Ponzi scheme a fraud on the American people, repeal the Federal Reserve Act of 1913 that was fraudulently passed by Congress and in its place set up a new national United States Bank owned by all the people of the united States of America, with its officers elected by the people, with branches in each state with their branch officers elected by the people of the state the branch office is located in so that our new national bank is 100% owned by all the people of our country and run by their elected officials. Since the Federal Reserve Act will be repealed, the Federal Reserve Bank will cease to exist as well as the national debt owed to it will be thus cancelled. Additionally, all fractional reserve banking in the whole nation must be declared illegal, because that is how 90% of the money is currently created, as debt lent out by local banks. Henceforth, our national money will be created only as an asset based receipt monetary system owned by the people.

An Asset Based Receipt Monetary System

Congress should set a date, such as April 15 to issue the new United States money with all Federal Reserve Notes recalled. All noncredit card debt will be paid off with our new United States Currency except debt owed to the Federal Reserve bank. Credit card debt will just be cancelled, and no interest will be paid since no money was ever created to pay the interest in the old debt-based monetary system. Instead of "Federal Reserve Notes," the new money can just be called "United States Currency" dollars. Our new money will be backed by the country's gross national product, for goods produced and services provided by all the working people in the nation. The new money thus created will be owned by we, the people, and not the Federal Reserve as is the case today.

The new money issued will not create inflation because it will just replace dollar for dollar all the old Federal Reserve Notes. The new asset money will replace all Federal Reserve Note currency and all debts will be paid off with our new currency, except credit card debit and debt owed to the Federal Reserve Corporation which will just be cancelled, so that there will be no debt as of April 15th. Mortgages will be paid, business debt will be paid, and the bankers (except the Federal Reserve bank) will get their money for all the debt owed them and the people will be debt-free. After that time, the bankers can still lend money, but only what they have in their vaults, since fractional reserve banking where the bankers created money out of nothing will now be illegal.

After all non-credit card debt is paid, with our new national banking system, new money will be created ONLY as receipts for voluntary taxes paid, instead of as debt. This will be a voluntary incentive for paying taxes in this new monetary system. New money will be created ONLY as receipts for voluntary taxes paid. Congress will revise and simplify the income tax code to consist only of a flat 10% income tax on the gross income of salaried workers and on the net income of businesses and investments paid to the United States bank in their state. Thus our new monetary system can take care of all the monetary needs of the federal, state and local governments.

This new asset based receipt monetary system then will work similar to the tally stick system that worked in England for over 500 years in the middle ages. They had no inflation or deflation, and the government and the people had all the money they needed for abundant prosperity with no debt. In the tally stick system, the only new money created were receipts for taxes paid and was given to the tax payers. Similar to the Biblical Tithing, in our new monetary system, taxes will be 10% of income paid voluntarily to our national bank and the receipt received upon payment will be the new money issued by our national bank that can be deposited into personal banking accounts with our national United States Bank to be spent into circulation, save or invest. As such, our government will have all the money it needs to operate and the people will own their money as registered in our national bank.

The government can then eliminate the IRS because the government would have all the money it needs without any enforcement to collect it.

The IRS was originally was set up to collect all income taxes payable to the Federal Reserve for interest on the debt incurred by the national government. In fact, none of the income tax ever went to fund the government. The Internal Revenue Service was set up to collect income tax on the American people about the same time that the Federal Reserve Bank was set up and all income tax went only to pay the interest on the national debt. In fact, for years these words were stamped on the back of checks paid to the IRS as income taxes: "Pay Any Federal Reserve Bank for Debt Incurred by the Federal Government."

With our new monetary system, as the wealth of the people increases, our federal, state and local governments can be reduced in size and scope and the rich can volunteer for government service.

As with the tally stick system practiced in England for 500 years during the middle ages, the people will voluntarily pay 10% of their income to the United States bank for which they will get the same amount back as receipts for taxes paid in new United States Currency dollars. Congress will not be allowed to create new money. The banks will not be allowed to create any new money, and the people will not be allowed to create new money. The only new money that will be allowed to be created will be by the United States bank and it will be created only as a receipt for taxes paid by the people and their businesses. Taxpayers will be given the option of receiving their NEW money in paper currency, gold, silver or copper coin, or as electronic money – all asset based money, not based on debt. The new money issued as coin will be denominated by the United States mint at a greater face amount than the intrinsic value of the metal in the coin to encourage its use in circulation. This new money will be issued ONLY as receipts for the voluntary 10% income taxes paid so as to not cause inflation. This will be an added incentive for taxpayers to pay the voluntary income tax. In the old monetary system, the banks received all the benefit of new money created plus interest on loans, plus income taxes and repossessed property. In the new monetary system, the people will have no debt, no

interest to pay, ONLY one tax and will receive ALL the new money created with no property repossessed. The result will be that EVERYONE will become rich.

Here is a scenario with a person earning \$20,000 a year. The new money he will get each year will increase his yearly income by 10% so that in 10 years' time his income will more than double.

Year	Yearly Income	10% Tax
1	\$20,000.00	\$2,000.00
2	\$22,000.00	\$2,200.00
3	\$24,200.00	\$2,420.00
4	\$26,620.00	\$2,662.00
5	\$29,282.00	\$2,928.20
6	\$32,210.20	\$3,221.02
7	\$35,431.22	\$3,543.12
8	\$38,974.34	\$3,897.43
9	\$42,871.78	\$4,287.18
10	\$47,158.95	\$4,715.90

2.36

With the Asset Based Receipt Monetary system, the new money that the banks used to get, instead goes to the tax payer. In this example, the tax payer earned \$20,000 the first year, and paid \$2,000, (the 10% voluntary tax) to the United States bank. This did not reduce his income because he gets it right back at the beginning of the next year as a receipt for his taxes paid the previous year. When the bank sends him his receipt for the income tax he paid in the form of NEW money in the amount of \$2,000, this is income that he must count with his next year's income because he receives it in year two. So in year two, his income is \$22,000, and his income thus goes up each year by 10% so that in ten years' time his total income has more than doubled. In year 10, his income is \$47,158.95 of which he pays \$4,715.90 in income tax, but which he gets right back in NEW money, so it didn't cost him anything to pay his taxes, yet because he paid 10% of his income in taxes each year, for which he got back the same 10% in NEW money, this caused his Year 1 income to increase by 2.36 times in ten years' time.

This increase in income is what the bankers used to get in the old monetary system where they received the benefit of all new money created. In our new monetary system, the tax payer gets all the new money. Thus, everyone can become rich with our new asset based receipt monetary system. There is no inflation in this system, because the gross national product increases in tandem with the increase in the money supply.

The rich can thus consecrate greater and greater amounts of their excess earnings to our National Banking System so our government can fund worthy enterprises with grants. The old monetary system was based on scarcity, giving rise to war, indebtedness and bankruptcy. The new monetary system is based on abundance for everyone. And since we, the people, will be paying for our government with our taxes, the government will do what WE want, instead of the current system where the government does what the banks want. We, the people, are the sovereigns, and our government will again become our servant as it should be.

Our new national bank will issue new money not as debt, but as an asset, interest free, as receipts for taxes paid. With this tax money, government can then fully fund Social Security for our retirees, even to lowering the retirement age, and increasing their monetary payment for all the years they have served our country faithfully. Instead of issuing money as debt, the state branch banks will fund our government which can then accept grant applications and fund businesses and home purchases with grants.

Imperative with this new monetary system, it is MOST important that Congress outlaw all fractional

reserve banking, as well as all other ways the bankers and their minions create money, such as short selling on the stock market and the creation of credit card debt. The banks, including mortgage companies, and all other institutions, the Congress, and even the people, will NOT be allowed to create money period. Only our national bank will be allowed to create new money, and only as a receipt for taxes paid. This prerogative of creating our nation's money was given to Congress in the Constitution by the people based on our national productivity - "To coin Money, and regulate the Value thereof," meaning the power to create money was given to Congress. The banks currently create money out of nothing and cause inflation, deflation and booms and busts by regulating the issuance of money created as debt and the setting of interest rates. Currently, the Federal Reserve Note is worth only about 1 cent of its 1913 value, which means the Federal Reserve and their private stock holders have literally stolen 99% of the wealth of America through the inflation of its currency.

Our new asset based receipt monetary system will automatically create a stable money supply with NO inflation nor deflation. In the tally stick system, which our monetary system mimics, the amount of currency in circulation is maintained automatically with a constant value in relation to the economic growth of the nation. As the economy grows, the amount of currency in circulation automatically increases in tandem with the economic growth and so does not cause inflation. Should the population grow, but the amount of currency to support that growth does not increase also, deflation would set in, like happened in the Great Depression when the banks were not lending, so that there was not enough money in circulation to support a vibrant economy. The PRIME purpose of our new Asset Based Receipt Monetary system is to create a steady economy, to prevent banks from creating new money as debt and the resulting booms and busts as they arbitrarily decide to approve or not approve loans or to arbitrarily increase or decrease interest rates to cause bankruptcies where they can repossess people's property and businesses for payment of the interest money that they do not create. Our new monetary system will provide industry with the money they need to keep the people optimally employed creating an economy with a stable monetary value so that the people do not lose the value of their money to inflation nor their assets to deflation and so that a steady return on investments can be made and people can save their money for retirement and to take care of them in their old age.

Credit card debt will be cancelled in this new asset-based system. It will be illegal to create credit card debt by private banks or other private or public institution. Our money will be an ASSET based monetary system, not a DEBT based monetary system. Debit cards can be used but no privately issued credit cards will be allowed since that is one way the banks currently create new money. In the Asset Based Receipt Monetary system, banks will NOT be allowed to create money, neither will Congress be allowed to create money, nor the people. Only our government bank will be allowed to create new money and ONLY as a receipt for taxes paid.

Another source of income that helped to fund our government up until free trade removed it was import taxes. The federal government should impose an import tax on all goods and services imported into the country to equalize their value to the domestic production, to give a fair playing ground for domestic production to compete with the international market. This will result in full employment and keep our businesses in business. Since the State and local governments will be fully funded with our new monetary system through our national bank and its state branches, all local taxes can be also eliminated. Property tax should be eliminated thus returning full ownership of property to the people. In fact, all other taxes should be eliminated to bring prosperity back to our country.

Counterfeiting prevention measures will be implemented for our national currency so enemies of the people cannot destroy our currency as the Bank of England did during the War of Independence when the value of the Continentals were inflated out of existence with counterfeit money. The new money could be issued with a serial number with a bar code readable by bar code reader to verify over the internet that the money is registered in the national bank as belonging to the person presenting it for a purchase. The national bank database will be accessible via the Internet and at cash registers by scanning the bar code serial number on the money to determine that the money is legitimate currency issued by our government bank and verified as belonging to the account holder.

Counterfeiting will be prevented by having each monetary unit issued with a unique serial number and assigned to its owner in the national bank database. Every citizen, resident and business could have an account in the national bank, and the account would list all the monetary units belonging to each account. When the monetary unit, such as a \$10 paper currency certificate is transferred to someone else in a purchase, the seller of a product or service could scan the serial number of the monetary unit offered by the buyer with a bar code reader. The buyer could then enter his password and the transaction would be approved as being valid and belonging to the buyer and the monetary unit with its serial number would then be transferred to the new owner with the record of the transfer completed in the national bank database. Since all monetary units will be assigned an owner in the national bank database, should a counterfeit monetary unit be scanned, the bank computer will automatically detect whether the monetary unit serial number is unique in the database and that that monetary unit is assigned to the correct account owner. The counterfeit monetary unit would thus be detected and the transaction not authorized. Thus no one would be able to destroy the value of our currency because all counterfeit money could immediately be detected.

If Congress would implement this new financial plan without delay, our economy will increase in strength and our nation would become so strong that no-one would dare attack us. And if they did, we would be strong enough financially, to be able to repel them.

Since all wars are caused by the international bankers and their monetary Ponzi schemes around the world, Congress can end all wars around the world and bring our troops home to defend our country.

What's more, Congress can do as our founding fathers did when they invited Canada and Mexico to join the Union, and invite all the countries of the world to join the Union. This way all peoples of the world can be covered by our constitutional freedoms, and everyone will have representation in Congress and benefit from our Asset Based Receipt Monetary system.

Therefore, Congress should, after setting up our new Monetary System, immediately withdraw from the banker's created United Nations, which was established by enemies of our country, and order the United Nations to remove themselves from our national soil.

Our Founding Father, Thomas Jefferson stated that if we should ever allow the banks to control the issuance and control of our money, the banks and corporations that would rise up around that monetary power will eventually deprive all our citizens of their property and we would end up homeless on the land our forefathers fought to preserve for us.

In fact, the main reason the Revolutionary War was fought was over the right of Americans to produce and control the issuance of their own paper money. The Bank of England wanted to have exclusive monopoly power over the issuance of money in America. The Bank of England also started the War of 1812, and again in the Civil War they financed the southern states against the north, and even had President Lincoln assassinated because he dared to issue asset based money instead of borrowing the bankers debt based money. President Kennedy was also assassinated because he issued some asset based currency instead of borrowing debt based money from the Federal Reserve Bank.

So the people we are dealing with, these international bankers who run the world through their central banks, are really thugs of the highest order. They threaten the leaders of other nations to do their bidding with threats on their lives or on their families. They have even said they want to eliminate 90% of the world's population with war, poison, famine, pandemics and whatever else they can think up.

It is time we stand up to these criminals. The bankers love to create booms and busts so they can repossess real property for debt money that they create out of nothing, and as such does not cost them anything to make. The value of their money is stolen from we, the people, who are the source of all wealth. Millions of Americans have lost their homes, their properties and businesses, and we are now in danger of losing our country to these ruthless thugs that killed millions in Russia because the Czar refused to accept one of their central banks in their country. The Czar lost to the Communists

that were funded by the bankers. Millions of Chinese lost their lives to the overthrow of their country to these international bankers when the communists took over. The international bankers DO NOT have the best welfare of We, the people of America or the World in mind. They only care about their profits and control of everyone else.

The corporations that have risen up around the international bankers are also complicit in profiting from destroying the people. The pharmaceutical companies and their medical doctors kill thousands of people every year with their poisonous medicines, butcher knives and radiation. They also cause much sickness and disease with their poisonous mercury and aluminum hydroxide vaccinations, and mercury laden dental fillings causing autism in children, and Alzheimer's in older people. Their food companies are poisoning our people with additives such as Aspartame, Sucralose, and other names given this poisonous sweetener. Other harmful additives they put in our food are hydrogenated oils that clog up arteries causing heart disease, mono-sodium glutamate that kills brains cells and causes people to get fat by sending messages to the brain that they are still hungry no matter how much they eat. A Russian scientist found that genetically modified grains created by the Monsanto Corporation that pumps insecticides into their seeds causing tumors, asthma and indigestion increases the death rate by 50% and people become unable to have children after three generations.

The Federal Reserve's corporations are also complicit in black project back-engineering of flying saucer technology from craft that have been knocked out of the sky. They are hiding this technology from we, the people and even working to use it against us. Congress should reveal this free-energy technology to the benefit of the people because all of it belongs to us. We paid the taxes for it. If Congress had not been complicit in funding these black projects to hide this technology, we would all right now be flying around in flying saucers – providing all the energy from the vacuum of space to fix the energy crisis, and preventing all the daily accidents that flying saucer technology would prevent. The powering of these craft creates a powerful repulsive field about the craft that repels anything they come close to – thus preventing accidents. This technology if given to the people would prevent the thousands of deaths and injuries from vehicle accidents every year, and save the cost of the accidents and injuries also. Giving our people this technology would help us defend our country, and provide us all the energy we need so we are not dependent on oil imports.

So enough is ENOUGH! Congress MUST bring the international bankers to justice, and replace their debt-based banking system with an asset based receipt monetary system. We Americans have got to lead out on this – to create an asset based receipt monetary system that will bring stability to the country and the world instead of the banker's debt based monetary system that gradually concentrates all wealth and power into their hands at the expense of the bloody wars our people worthlessly fight for them around the world -- and what do we get for all our blood and taxes? We get our homes and businesses repossessed, our lives shortened, poisoned and killed. Certainly Congress can give We, the people something better than this!!!!

Do you LOVE your Country? Do you love your COUNTRYMEN?

Then start DOING something GOOD for the people or soon there will be no Congress and no Country for any of us -- because the monetary power set up by Congress in the form of the Federal Reserve and the corporations that have risen up around the Federal Reserve is destroying our country and our world!

In transforming our monetary system from a debt-based to an asset-based receipt monetary system, Congress can expand the benefits of this abundance creating system to the world. We could offer other countries to pay their debts on these conditions:

1. They would accept a United States bank in their country with officers elected by their people.
2. They would trade their debts and national currency for United States Currency based on the April 15th value of their currency in relation to United States currency thus eliminating their national currency by exchanging it for United States currency.
3. Credit card debt will be cancelled in that country because they will be going to an asset based

receipt monetary system instead of a debt-based monetary system.

4. In return for us paying off their debt and trading their currency in for United States currency, the citizens of those countries will agree to pay a voluntary 10% income tax to the United States bank in their country for which the bank will issue receipts in the form of new United States currency to those paying the income tax in the same amount as taxes paid.

5. All fractional reserve banking in their country will cease.

6. All other taxes on their people other than the voluntary 10% income tax will be eliminated.

Thus as their economies grow, and prosperity increases, money received from the voluntary 10% income tax will increase automatically giving all the funds necessary to fund their governments through the United States bank. Congress could then invite these countries to join the Union so that their peoples will have representation in Congress, at which time, all tariffs imposed on their countries will be dropped as they become States of the Union under our inspired Constitution.

Sincerely,

The American Taxpayer
