Subject: North Pole Inner Earth Expedition - Eleventh Update

To All Interested Scientists, Explorers and Friends of our North Pole Inner Earth Expedition,

***** Eleventh UPDATE *****

RE: North Pole Inner Earth Expedition Introductory Documentary DVD

With the passing of our dear friend and former expedition organizer Steve Currey, who died of brain cancer July 26, 2006, expedition members have regrouped and chosen a new expedition leader, Dr. Brooks Agnew.

Dr. Agnew had joined our expedition shortly before Steve passed away, and offered to take over the leadership after Steve's passing. The expedition now has as it's leader and expedition organizer a credentialed, world renowned scientist, [Dr. Brooks Agnew](#). We are very grateful that he has offered to carry on our quest.

With the election of Dr. Agnew as our new expedition organizer, the expedition to Inner Earth has been renamed the North Pole Inner Earth Expedition. A new company has been formed to carry out this expedition. Our company is now Advanced Planetary Explorations, LLC, under the auspices of our Phoenix Science Foundation. The expedition is now scheduled to leave Murmansk, Russia aboard the Russian nuclear icebreaker, The Yamal, in the summer of 2008.

To do this, we must raise the funds to pay the \$2 million for the cost of this expedition. The deposit deadline to reserve the Yamal is January 31, 2008. To raise these funds we are inviting you to purchase our expedition introductory documentary DVD.

You can learn more about our North Pole Inner Earth Expedition, by visiting our website at <http://www.phoenixsciencefoundation.org/apex.htm>. Dr. Agnew recently returned from Tibet where he filmed footage for our expedition documentary. The expedition introductory documentary DVD is now available at his Internet radio station website at <http://www.x2-radio.com/shop> and <http://phoenixsciencefoundation.org/index.html>. With enough sales of our documentary DVD, we could fund the expedition ourselves and thus reserve to the expedition company all film rights. We invite you to purchase a copy to help us fund the expedition.

We are of the opinion that this expedition will be the greatest expedition in the history of the world. Whereas Columbus discovered a new continent, we will discover a whole new world -- that world within our world -- Inner Earth. And you will be part of this discovery with your support and interest in what we discover.

With the successful conclusion of this expedition to Inner Earth, we may be able to eventually embark on planetary explorations to other worlds carried out by we, the people -- not government agencies that are intent on hiding what they discover from the tax payers. Nevertheless, we are grateful for what they do share with us.

Recent Cassini images coming back from Saturn have revealed unusual formations at both poles that most likely are indications of polar openings into the interior of that planet. You can view the south polar opening image [here](#). And the north polar opening image of Saturn [here](#).

Curiously, the north polar opening of Saturn has a hexagonal shape. Since orthodox science claims that Saturn is an entirely gaseous planet, this hexagonal shaped polar feature is inexplicable to them. A hexagonal shaped polar opening? Only a creative creator would create such a thing! He did this probably to stump our atheist scientists.

How in the universe could a hexagonal shaped feature occur on a gaseous planet? It has SIX straight sides! This hexagonal shaped feature has endured for over two decades when it was first imaged by the Voyager spacecrafts. Such an enduring feature with straight sides indicates this is a surface feature of the planet. Which strongly indicates that Saturn has a solid surface and is not an entirely gaseous planet as orthodox science would have us believe.

If Saturn has a solid surface as this hexagonal polar opening indicates, then Saturn would have to be a hollow planet. The reason

is that Saturn does not have enough mass to be solid all the way through. In my ebook, I have calculated that if Saturn has a shell that is perhaps 5% of it's diameter, it would have a shell density of 2.27 gm/cc, which would be a solid. Earth's average surface density is 2.7 by comparison. You can read NASA's article on Cassini's images of the "Bizarre Hexagon" on Saturn's north pole [here](#).

You can read NASA's article on what I claim is the south polar opening of Saturn [here](#). NASA scientists are calling the south polar opening of Saturn the "eye of a monster storm." But unlike hurricanes and cyclones on earth which move about, this "monster storm" doesn't move. It seems to be attached to the solid surface of the planet. Curiously, exactly where this "eye of a monster storm" that doesn't move is located at Saturn's south pole, in February of 2005, scientists at the Keck Observatory in Hawaii reported a "hot spot." NASA scientists have a hard time explaining how temperatures on Saturn "take a sudden jump from about 30 degrees south with another sharp rise at the very tip of the pole." But this is exactly what we would expect if Saturn is hollow with polar openings and warm air emanating out the polar openings.

And not only warm air, but auroral radiation has been observed emanating from the polar regions of Saturn. NASA's Cassini spacecraft has detected electrons emanating out of Saturn's north polar area, as you can read in this [Space Daily](#) article. This auroral radiation is called "backward electrons."

NASA scientists call this auroral radiation coming from the polar area "backward electrons" because they claim that auroras are caused only by our outer sun. These "backward" flowing electrons emanating out of the polar area is evidence that the auroral radiation comes from INSIDE the planet, not from our outer sun. In fact, the solar wind from our outer sun upon approaching a planet is deflected AROUND the planet by the planet's own electromagnetic field, and so CANNOT create the auroras on any planet. Saturn has beautiful [auroras at both poles](#) as imaged by the space Hubble telescope.

This evidence indicates to us that Saturn is actually hollow, and it's brilliant aurora is caused by it's Inner Sun which emanates a powerful solar wind of electrons and protons OUT of Saturn's polar openings which then follow the electromagnetic field lines of the planet AWAY from the polar area. This powerful Inner Sun solar wind is what causes the auroras to light up on all the planets including earth. While in Alaska in 1981, I watched the auroral radiation flowing UP causing the light of the aurora.

Even NASA has reported a [polar fountain](#) of energized particles emanating from the polar area to fill the magnetosphere of the earth. This polar fountain of energized particles most likely is what lighting up the auroral lights. Our conclusion of this evidence is that the auroral lights are NOT caused by our outer sun, but by an Inner Sun suspended within the hollow of each planet.

Not only is the planet Saturn most likely hollow, with a solid shell, with polar openings that emanate heat and auroral radiation from it's Inner Sun, but all planets, moons and stars most likely are HOLLOW and very likely inhabited within!

You are invited to be part of the great discoveries that are on the horizon beginning with our expedition in search of the north polar opening into Inner Earth next year.

You are invited to order our documentary DVD available at <http://www.x2-radio.com/shop> and soon to be made available on Amazon.com to learn more about our expedition and the things we are discovering.

We only have 100 seats available on the expedition, and 24 are reserved for previous expedition members, but applications are still being accepted. Your application COULD be one that is accepted. Unlike the previously planned Voyage to Our Hollow Earth defunct expedition, this expedition is not charging for a place on the ship. All expedition members will go free if they can get to the departure airport.

It is our hope that we can sell enough documentary DVDs to pay for the expedition. And unlike government sponsored expeditions that have kept their discoveries hidden from the people, we intend to let the whole world know what we find. So YOU, right now, are part of this expedition by just being interested in our progress and perhaps buying a DVD. Please DO let all your friends know how they can get a copy!

Next Year in Eden,

Rodney M. Cluff, author
