Virtual City of Light

Welcome to the Virtual City of Light.

You are hereby invited to become a citizen of the Virtual City of Light where we can work together in harmony by living our lives with integrity to build prosperity and abundance for all.

On the menu above, click on the City Charter to review the vision of what we hope to achieve and the rules we will live by to achieve that vision.

Harmony
Integrity
and
Prosperity for All

As explorers of hollow planets, what would our base camp look like?

I have called our base camp, The City of Light. And those working on relocating to our base camp in preparation for exploration of hollow planets, I am calling, The Virtual City of Light.

Its a place for launching our exploration of hollow planets, beginning with our own, Our Hollow Earth. Our base camp, The City of Light, will also be the pattern and the support for the colonies we establish in hollow planets. We will first build our City of Light base camp, then duplicate it somewhere else, starting with some place in Our Hollow Earth, then in another hollow body in space, perhaps Our Hollow Moon.

NASA's Apollo astronauts found the surface of Our Moon pretty inhospitable. But seismographs set up on the Moon by the Apollo astronauts subsequently recorded meteor hits on the moon, and the spent lunar modules left crashing into the Moon. Those seismograph recordings were then transmitted automatically to Earth. What the Moon seismographs discovered was that the Moon is hollow. The bombardments of the Moon with meteor hits and the lunar modules crashing into the lunar surface set the Moon to

ringing like a bell. The Moon seismographs discovered that just like when our Earth is hit by a large earthquake that the Earth rings like a bell, so does the Moon.

So what does that tell us? A bell is hollow, as is our Earth and the Moon. So like Earth's polar openings that lead into the interior of our hollow world, the Moon must also have openings somewhere on its surface that lead into the interior hollow world of the Moon. In fact, occasionally it has been noticed that water vapor emerges from the interior of the Moon and floats over the moonscape. So the moon has a hollow interior that contains water. Most likely it is a paradise location, with an Inner Sun, an ocean of water and a continent wherein people do live. Perhaps the Moon's interior hollow world could be explored and with permission of the people that live there, a colony could be established for people from Earth. We would, of course, need to obey their laws, and contribute peacefully to their society. Certainly, a Moon base established in the ideal conditions of the interior hollow world of the Moon would be much more hospitable than attempting to establish a Moon base on the exterior of the Moon like Elon Musk envisions doing. And what about the Alien base on the far side of the Moon that warned our astronauts off and told them not to come back? How is Elon Musk going to make peace with them? And if we go to colonize the Moon, we, of course, will have to make a peaceful deal with the inhabitants of the Moon, the people that already live there.

That is where our City of Light base camp comes in. In our City of Light we will practice being a peaceful people, so that when we go exploring hollow worlds, we will be received as a peaceful, intelligent, law-abiding people so that the peoples of other worlds which we will meet will accept us, and be happy that we came to become one with them.

To join our Virtual City of Light, the precursor of The City of Light base camp we will build somewhere on the ground in preparation of exploring hollow worlds, you are invited to visit Virtual City of Light (ourhollowearth.com)
