

The South Polar Opening of Venus, photos taken by the European Space Agency's robotic Venus Express spacecraft

Above, are several photos of the South Polar Opening of Venus.

The South Polar Opening of Venus looks like a vortex in the heavy cloud layer that covers the planet Venus. These photos of Venus' South Polar Opening into the interior of that hollow world was taken by the European Space Agency's robotic Venus Express spacecraft.

People live in the hollow interior of Venus, and have come to Earth in their spacecraft. So say two Contactees who have had personal interactions with the people from Venus.

One Contactee was Howard Menger, whom we met at the only UFO conference we have ever attended. In 1990, my wife and I attended the UFO conference here in Phoenix Arizona, where we met Howard Menger. He had a model of a flying saucer craft he built for the U.S. government in Colorado Springs, Colorado, from knowledge he had learned from the Venusians over a period of many years. I bought his book, *The High Bridge Incident, the Story Behind the Story*.

In his book, Howard tells how he met the people of Venus in his youth who came to Earth to help us. They asked him to help them. He would teach them our customs, how we dress and our mannerisms, and would help them find jobs during their stay on Earth.

He finally asked them if they would do something for him. "Sure," they answered. "What is it?" "I would like to go to the Moon," Howard replied. This was years before the Apollo astronauts went to the Moon. The Venusians told Howard to meet them out in the countryside from his home, and a flying saucer came down and they took him to the Moon. He has a photo in his book of the Moon as they approached the moon, which he took through a porthole on the craft.

They landed their spaceship on the other side of the Moon, the side we never see from Earth, at an Alien base, where he says he met people from all the planets in our solar system. Before our astronauts went to the moon, one of our spacecrafts sent to the Moon, took a photograph of that Alien base on the far side of the Moon, but the NSA kept that fact a secret. You can listen to the testimony of one of Dr. Steven Greer's expert witnesses testify that he was shown photos of the alien base on the far side of the moon, years before the Apollo mission. See the testimony of Sargent Karl Wolfe at <https://siriusdisclosure.com/evidence.../witness-testimony/>

NASA to this day says they have not detected any life on any of the planets and moons of our solar system. So where are the people from the other planets of our solar system living that Howard Menger met on the Moon?

In my book, *World Top Secret: Our Earth IS Hollow!*, I provide the evidence I have found, that all the planets, moons, asteroids, comets and even the Sun are all hollow bodies. So then logically, the place the people of other planets are living is in their hollow interiors, because their exteriors are either too hot or too cold. And access to their interior worlds is through Polar Openings, like this photo of Venus' South Polar Opening. It is an entrance to the interior hollow world of Venus, wherein people like us do live.

Another Contactee, was Dr. Frank Stranges. He had a bachelor's degree in Divinity as well as PhDs in psychology and philosophy from Faith Theological Seminary in Fort Lauderdale, Florida. He became interested in UFOs and founded an investigative organization called the National Investigations Committee on Unidentified Flying Objects.

He would attend UFO conferences around the country. At one conference he was given a photo of a man from Venus, called Valiant Thor, by a retired Air Force

photographer. This retired Air Force photographer met Valiant Thor of Venus with several other Venusians at a UFO gathering behind Contactee Howard Menger's home in Virginia, and took a photo of them. So after that, at all the conferences Dr. Frank Stranges attended he would show people this photograph of a man from Venus.

At one conference in Washington D.C., a lady came up after his presentation and asked him if he would like to meet the man in that photo. She said she worked at the Pentagon. Of course, he would. So the next morning this lady took him to the Pentagon and took him down a hallway to a door and said, "Go in there," and she walked on down the hall. So Dr. Stranges enters the room. All the Sergeants are working hard at their desks and no-one pays any attention to him. Wondering how he would meet this man from Venus, presently a man approaches him, smiles and says, "Dr. Frank Stranges, I am Valiant Thor. I am from what you people of Earth call the morning and evening star. The planet Venus."

Dr. Stranges became fast friends with Valiant Thor, and over the years took him aboard his flying saucer and learned many things from him. One of the things that Dr. Stranges learned from Valiant Thor was that his people of Venus live on the inside of Venus, that Venus is a hollow planet, just like Earth is a hollow planet, as well as all the planets of our solar system are hollow and are inhabited within.

So Valiant Thor confirmed where the people live that Howard Menger met at the Alien base on the far side of the Moon: the planets are all hollow and their people live in their hollow interiors, where Inner Suns shine, where inner surface gravity holds their feet to the inner surfaces of their planets, where lush vegetation, animals, and human life thrive. There are paradise locations in all the planets -- hidden from the view of our spaceships because they live in the interior of their hollow worlds.
